

I can solve systems graphically

3.1 (1-7 on mathxl)

Determine if the ordered pair is a solution

$$(2,3) \quad 2x - y = 1$$

x
 y

$$\begin{aligned} 2(2) - 3 &= 1 \\ 4 - 3 &= 1 \\ 1 &= 1 \checkmark \end{aligned}$$

$$5x - 3y = 1$$

$$5(2) - 3(3) = 1$$

$$10 - 9 = 1$$

$$1 = 1 \checkmark$$

yes

Determine if the ordered pair is a solution

$(-5, 1)$

$$x + 5y = 0$$

$$-5 + 5(1) = 0$$

$$-5 + 5 = 0$$

$$0 = 0 \checkmark$$

$$y = 2x + 9$$

$$1 = 2(-5) + 9$$

$$1 = -10 + 9$$

$$1 = -1$$

NO

X

$$\begin{array}{r} y - x = 1 \\ +x \quad +x \\ \hline y = x + 1 \\ m = 1 \\ b = (0, 1) \end{array}$$

$$\begin{array}{r} y + x = 3 \\ -x \quad -x \\ \hline y = -x + 3 \\ m = -1 \\ b = (0, 3) \end{array}$$

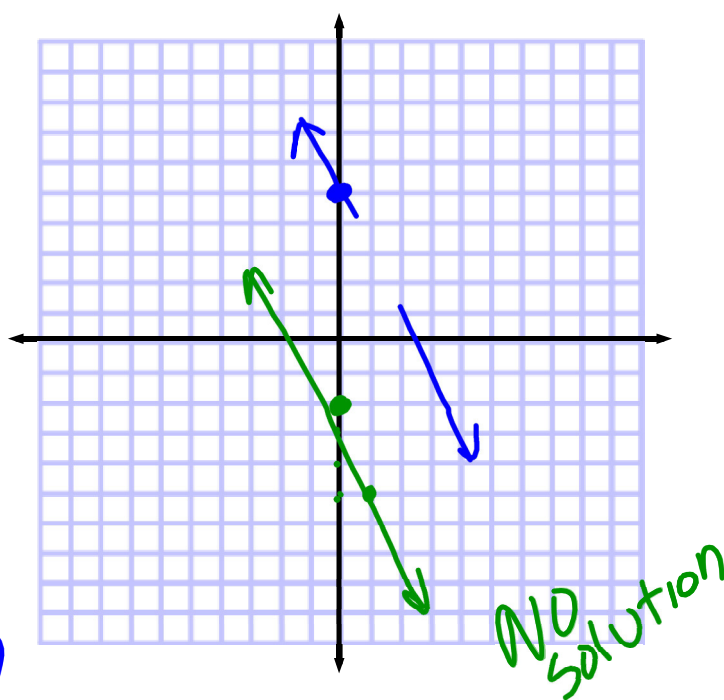

$$y = -3x + 5$$

$$m = -\frac{3}{1}$$
$$b = (0, 5)$$

$$y = -3x - 2$$

$$m = -\frac{3}{1}$$
$$b = (0, -2)$$

The sum of two numbers is 23. The first number is $\frac{3}{20}$ of the second number.

$$x + y = 23$$

$$x = \frac{3}{20}y$$

A basketball player scored 34 times during one game. He scored a total of 54 points, two for each field goal and one for each free throw. How many field goals did he make? How many free throws?

$$x + y = 34$$

$$2x + 1y = 54$$

$$3y - 2x = 6$$

$$-12y + 8x = -24$$
